

# Make check-in easier with Atrax

## PASSENGER SELF-CHECK BAGGAGE SCALES

**Reduce processing time at your airport: let the Atrax Passenger Self-Check Baggage Scale help you inform passengers and move them through the check-in process more quickly and with minimum hassle.**

This stylishly designed and cost-effective Atrax scale system is a must-have addition to your passenger processing system.

Available for passengers to use before they check-in, the user friendly and robust unit:

- Gives passengers a simple and timely means of ensuring their baggage is not over weight limits
- Assists passengers to reduce or redistribute weight between bags, should it be necessary
- Alleviates congestion and speeds check-in by increasing the number of passengers with weight compliant baggage
- Assists airlines and airport staff to ensure that baggage complies with airline requirements
- Is attractive and durable - yet lightweight and easy to move

## ATRAX - WORLD LEADER IN WEIGHING AND DIMENSIONING

Atrax Group is a world leader in the design, manufacture, integration and support of weighing, measurement and related control systems for airports around the world.

Our products and systems are installed and utilised in over 800 airport projects across more than 165 countries and territories.

## WHY BUY FROM ATRAX?

- With over 800 airport projects completed, Atrax Group understands the airport environment and your requirements better than anyone
- Highly durable, with a refined style - this good looking unit will remain an attractive part of your airport long into the future
- A cost-effective option for airports looking for value for money
- We have designed out the service requirement - easy to use, the battery life indicator shows when to change the standard 'off the shelf' batteries.

Trusted in over 165 countries

## ADDITIONAL BENEFITS

- Stable weight reading in under 2 seconds means reduced processing time.
- The highly visible digital display gives accurate readings.
- Robust live weighing allows passengers to remove or add items to a bag on the scale and immediately see the result on the display.
- An overload capacity of 150kg means passengers standing on the scale will not damage the load cell
- Maximum exposure - large front and back panels give you plenty of space for instructional or promotional material.
- Fascia panels can be easily swapped out for new panels with updates or changes.
- The scale goes into standby mode when no baggage is detected, so you conserve battery life and reduce battery costs over time.
- The strong, stable, and lightweight unit has wheels and is easy to move, as an when required.
- May be incorporated with other fixtures to feature as a service area.
